DETAILED ACTION

Response to Amendment

1. Applicants' amendment and remarks, filed January 22, 2006, has been made of record and entered. Claims 1-20 have been canceled. Claims 21-23, 25-26, & 29 have been amended. Claims 21-39 are currently pending.

Claim Rejections - 35 USC § 102(e)

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

3. Claims 21-39 are rejected under 35 U.S.C. 102(e) as being anticipated by Sung (PG Pub. No. US 2002/0131914 A1).

Sung discloses a catalyst composition comprising a mixture of: (a) ceria having a weighted numerical average particle size of not greater than about 100 um and (b) a catalytically effective amount of a platinum-group metal catalytic component disposed on a refractory metal oxide support, said catalyst composition containing substantially no organic compounds nor substantially any zirconia in the form of a composite or a solid solution with said ceria (see page 12, claim 1). The catalyst is disposed on a carrier (see page 12, claim 2). The carrier comprises cordierite (see page 13, claims 3 & 4). The ceria has a weighted numerical average particle size

of about 1 to about 30 nm (see page 13, claims 5 & 6). See also page 13, claims 7-21 of the reference for details on the refractory metal oxide support materials, etc.

There is no patentable distinction seen between the claimed catalyst and that disclosed by Sung. Thus, the claims are anticipated by the teaching of the reference.

Response to Applicants' Arguments

4. Applicants' amendment and response filed on January 22, 2006 has been fully considered, but not deemed persuasive in view of the new ground of rejection(s) and/or objection(s) above.

The newly applied reference to Sung clearly teaches a catalyst composition having average particle size of less than 100 nm, thus meets the claimed limitation as required in the instant claim 21.

5. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event,

Art Unit: 1754

however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
